SOLUTION DELIVERY

Build / Enterprise

Developing custom software is the ultimate solution to addressing your business challenges. Our team possesses both the expertise and experience required to deliver a project that aligns with your business objectives and budget. We leverage our knowledge of AI to ensure that your custom software build is scalable and innovative for the future.

Custom Software in the AI Era

SaaSberry offers a cutting-edge build team that specializes in custom software solutions with AI at its core. Our team works closely with customers to ensure timely and budget-friendly delivery, effectively addressing their unique business challenges. With SaaSberry, you can trust that your software needs will be met with precision and innovation, empowering your business to thrive in the digital age.

"We solve your organization's efficiency at being inefficient."

The Journey

1. Scope + Plan

    • Accurately scope the production scale up of the solution.

    • Analyze the requirements, data assets and infrastructure.

    • Review all process & system dependencies.

- Assemble team based on requirements and skills specific to project.

- Business analysis to verify timelines and deliverables.

2. Architect

   - Design the most efficient software architectural implementation from stack to service.

   - Gap analysis for specific use cases.
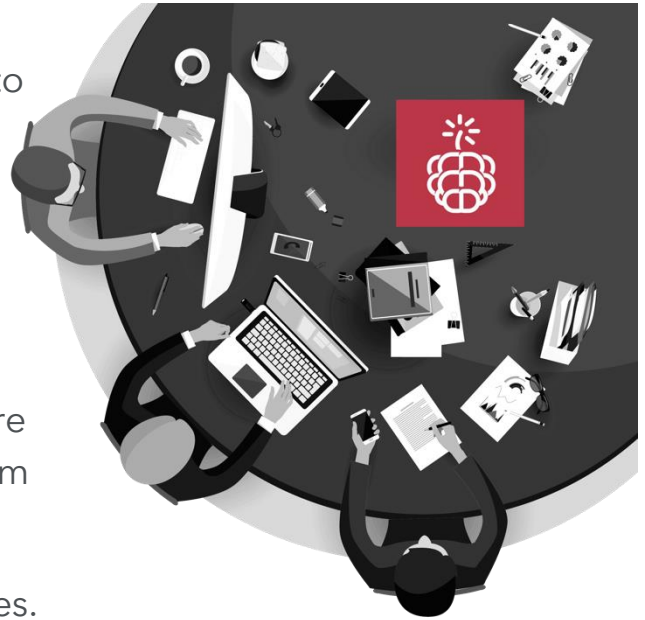

3. Build

   - Engineering build based on business priorities set by your team in collaboration with SaaSberry.

   - Leverage SaaSberry's micro-services for rapid build.

   - Application of agile methodology for iterative build.

   - Tight collaboration and reporting to your project stakeholders.

4. Test & Iterate

   - Manual testing.

   - Development of automated/AI driven testing.

   - Fine tune based on feedback loop.

5. Rollout

   - Deployment plan orchestrated with our DevOps team.

   - Cloud first considerations to deliver dependable, secure, and scalable infrastructure.

   - Reporting for business metrics as aligned to business objectives.

   - Infrastructure health reporting system.

6. Outcome

- Release prototype to beta users.

- Develop plan for feedback and measurement.

- Next steps report that maps out production scaling up and enterprise-wide deployment.
